## Chapter 1 Getting Started

### Introduction

The ADVANCODE 2D BARCODE SCANNER armed with the computerized image recognition system, bring about a new era of 2D barcode scanner.

The ADVANCODE 2D BARCODE SCANNER advanced chip design & manufacturing, which significantly simplifies application design and delivers superior performance and solid reliability with low power consumption.

The ADVANCODE 2D BARCODE SCANNER support all mainstream 1D and standard 2D barcode symbologies (e.g., PDF417, QR Code M1/M2/Micro and Data Matrix) as well as GS1-DataBarTM(RSS) (Limited/Stacked/Expanded versions). It can read barcodes on virtually any medium - paper, plastic card, mobile phones and LCD displays.

### About This Guide

This guide provides programming instructions for the ADVANCODE 2D BARCODE SCANNER. Users can configure the ADVANCODE 2D BARCODE SCANNER by scanning the programming barcodes included in this manual.

The ADVANCODE 2D BARCODE SCANNER has been properly configured for most applications and can be put into use without further configuration. Users may check the **Factory Defaults Table** in **Appendix** for reference. Throughout the manual, asterisks (\*\*) indicate factory default values.

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## Barcode Scanning

Powered by area-imaging technology, the ADVANCODE 2D BARCODE SCANNER features fast scanning and accurate decoding. Barcodes rotated at any angle can still be read with ease. When scanning a barcode, simply center the aiming beam or pattern projected by the ADVANCODE 2D BARCODE SCANNER over the barcode.

## Barcode Programming

Scanning the **Enter Setup** barcode can enable the scanner to enter the setup mode. Then you can scan a number of programming barcodes to configure your scanner. To exit the setup mode, scan the **Exit Setup** barcode.

If the scanner has exited the setup mode, only some special programming barcodes, such as the **Enter Setup** barcode and **Restore All Factory Defaults** barcode, can be read.

0006010

**Enter Setup**

0006000

**\*\* Exit Setup**

Programming barcode data can be transmitted to the Host. Scan the appropriate barcode below to enable or disable the transmission of programming barcode data (i.e. the characters under programming barcode) to the Host.

Restarting the scanner will automatically disable the transmission of programming barcode data to the Host.

0002010

**Transmit Programming Barcode Data**

0002000

**\*\* Do Not Transmit Programming Barcode Data**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

---

## Factory Defaults

Scanning the following barcode can restore the scanner to the factory defaults. See **Appendix 1: Factory Defaults Table** for more information.

**Note:** Use this feature with discretion.

0001000

**Restore All Factory Defaults**

## Custom Defaults

Custom defaults make it possible to save the frequently-used settings on the scanner.

Scanning the **Save as Custom Defaults** barcode can save the current settings as custom defaults. Once custom default settings are stored, they can be recovered at any time by scanning the **Restore All Custom Defaults** barcode.

Custom defaults are stored in the non-volatile memory. Restoring the scanner to the factory defaults will not remove the custom defaults from the scanner.

0001150

**Save as Custom Defaults**

0001160

**Restore All Custom Defaults**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## Chapter 2 Communication Interfaces

The ADVANCODE 2D BARCODE SCANNER provides a RS-232 interface and a USB interface to communicate with the host device. The host device can receive scanned data and send commands to control the scanner or to access/alter the configuration information of the scanner via the interface.

### Power-Saving Mode

By default, the scanner adopts the Power-Saving Mode to conserve power. However, if this mode is selected, you can only use RS-232 communication. If the Normal Mode is selected, you can use either RS-232 or USB.

0009000

**Normal Mode**  
**(RS-232 & USB supported)**

0009010

**\*\* Power-Saving Mode**  
**(RS-232 supported)**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## RS-232 Interface

Serial communication interface is usually used when connecting the scanner to a host device (like PC, POS). However, to ensure smooth communication and accuracy of data, you need to set communication parameters (including baud rate, parity check, data bit and stop bit) to match the host device.

The serial communication interface provided by the scanner is based on TTL-level signals. RS-232 can be used for most application architectures. For those requiring RS-232, an external conversion circuit is needed. The conversion circuit is available only to some models.

1100000

**\*\* Serial Communication**

Default serial communication parameters are listed below. Make sure all parameters match the host requirements.

Parameter	Factory Default
Serial Communication	Standard RS-232
Baud Rate	9600
Parity Check	None
Data Bits	8
Stop Bits	1
Hardware Flow Control	None

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## Baud Rate

Baud rate is the number of bits of data transmitted per second. Set the baud rate to match the Host requirements.

0100030

**\*\* 9600**

0100000

**1200**

0100050

**19200**

0100010

**7 Data Bits/Odd Parity**

0105030

**\*\* 8 Data Bits/ No Parity**

0105040

**8 Data Bits/Even Parity**

0105050

**8 Data Bits/Odd Parity****Stop Bit**

0102000

**\*\* 1 Stop Bit**

0102010

**2 Stop Bits**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## USB Interface

### USB Enumeration

If the scanner is connected to the Host via a USB connection, the scanner will be enumerated using S/N or “00000000” after power-up. **Enumeration using S/N** enables the Host to distinguish even between scanners of same model. **Enumeration using “00000000”** disables the Host from distinguishing between scanners of same model.

Driver installation is required for each USB device distinguished from others by the Host in the process of enumeration.

1100210

**Enumeration Using S/N**

1100200

**\*\* Enumeration Using “00000000”**

### USB HID-KBW

When you connect the scanner to the Host via a USB connection, you can enable the **USB HID-KBW** feature by scanning the barcode below. Then scanner's transmission will be simulated as USB keyboard input. The Host receives keystrokes on the virtual keyboard. It works on a Plug and Play basis and no driver is required.

**USB HID-KBW**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## USB Country Keyboard Types

Keyboard layouts vary from country to country. The default setting is U.S. keyboard.

1103001

**\*\* U.S.**

1103002

**Japan**

1103003

**Denmark**

1103004

**Finland**

1103005

**France**

1103006

**Turkey\_F**

1103007

**Italy**

1103008

**Norway**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

1103222

**Spain**

1103226

**Turkey\_Q**

1103227

**UK**

1103209

**Austria, Germany**

1103202

1103220

**Russia**

1103223

**Sweden**

1103218

**Portugal**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

### Beep on Unknown Character

Due to the differences in keyboard layouts, some characters contained in barcode data may be unavailable on the selected keyboard. As a result, the scanner fails to transmit the unknown characters.

Scan the appropriate barcode below to enable or disable the emission of beep when an unknown character is detected.

1103031

**Beep on Unknown Character**

1103030

**\*\* Do Not Beep on Unknown Character**

### Inter-Keystroke Delay

This parameter specifies the delay between emulated keystrokes.

1103050

**\*\* No Delay**

1103051

**Short Delay (20ms)**

1103052

**Long Delay (40ms)**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

### Convert Case

Scan the appropriate barcode below to convert barcode data to your desired case.

1103040

**\*\* No Case Conversion**

1103043

**Invert Upper and Lower Case Characters**

1103041

**Convert All to Upper Case**

1103042

**Convert All to Lower Case**

**Example:** When the **Convert All to Lower Case** feature is enabled, barcode data “AbC” is transmitted as “abc”.

### USB COM Port Emulation

If you connect the scanner to the Host via a USB connection, the **USB COM Port Emulation** feature allows the Host to receive data in the way as a serial port does. A driver is required for this feature.

**USB COM Port Emulation**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## Chapter 3 Scan Mode

### Batch Mode

If the Batch Mode is enabled, driving the TRIG pin on the host interface connector low activates a round of multiple decode sessions. This round of multiple scans continues until the active trigger signal is no longer present. Rereading the same barcode is not allowed if it was decoded previously in the same round. For good decode, the scanner transmits decoded data via communication port. To activate another round of multiple scans, the Host needs to first negate the trigger, waits 20ms or longer and then drive the TRIG pin low.

0302003

**\*\* Batch Mode**

0006000

**\* Exit Setup**

0006010

Enter Setup

## Trigger Mode

If the Trigger Mode is enabled, driving the TRIG pin on the host interface connector low activates a decode session. The session continues until the barcode is decoded or decode session timeout expires or the active trigger signal is no longer present. For good decode, the scanner transmits decoded data via communication port. To activate another session, the Host needs to first negate the trigger, waits 20ms or longer and then drive the TRIG pin low.

0302000

Trigger Mode

## Decode Session Timeout

This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 1ms increments from 0ms to 3,600,000ms. The default setting is 3,000ms. To learn how to program this parameter, see **Appendix 5**.

0313000

Decode Session Timeout

0006000

\* Exit Setup

0006010

**Enter Setup**

## Level Trigger/Pulse Trigger

**Level trigger:** Decode session is activated and continued by constant active trigger signal. The decode session ends once the barcode is decoded or decode session timeout expires.

**Pulse trigger:** Decode session is activated by electric pulse of trigger signal. The decode session continues until the barcode is decoded or decode session timeout expires.

0313090

**\*\* Level Trigger**

0313091

**Pulse Trigger**

## Auto Sleep

Auto Sleep allows the scanner in the Trigger Mode to automatically enter the sleep or low power mode if no operation or communication is performed for a time period (user programmable). When the scanner is in the sleep mode, receiving trigger signal or communication from the Host can awake the scanner. The scanner returns to full operation within 100ms.

0313060

**\*\* Enable Auto Sleep**

0313070

**Disable Auto Sleep**

The parameter below specifies how long the scanner remains idle (no operation or communication occurs) before it is put into sleep mode. It is programmable in 1ms increments from 0ms to 65,535ms. The default setting is 500ms. To learn how to program this parameter, see **Appendix 5**.

0313050

**Time Period from Idle to Sleep**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## Sense Mode

If the Sense Mode is enabled, the scanner activates a decode session every time it detects a change in ambient illumination. The decode session continues until the barcode is decoded or the decode session timeout expires.

Driving the TRIG pin on the host interface connector low can also activate a decode session. The decode session continues until the active trigger signal is no longer present or the barcode is decoded or the decode session timeout expires. The trigger signal needs to be negated before the scanner is able to monitor ambient illumination again.

0302010

**Sense Mode**

## Decode Session Timeout

This parameter sets the maximum time decode session continues during a scan attempt. If the timeout expires or the barcode is decoded, the scanner goes back to monitoring ambient illumination. It is programmable in 1ms increments from 0ms to 3,600,000ms. The default setting is 3,000ms. To learn how to program this parameter, see [Appendix 5](#).

0313000

**Decode Session Timeout**

## Image Stabilization Timeout

The image stabilization timeout is programmable in 1ms increments from 0ms to 1,600ms. The default setting is 500ms. To learn how to program this parameter, see [Appendix 5](#).

0313120

**Image Stabilization Timeout**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

### **Continue after Good Decode**

**Continue after Good Decode:** The scanner starts next decode session after good decode.

**Pause after Good Decode:** The scanner starts another round of illumination monitoring and image stabilization after good decode.

0313130

**\*\* Pause after Good Decode**

0313131

**Continue after Good Decode**

### **Timeout between Decodes (Same Barcode)**

Timeout between Decodes (Same Barcode) can avoid undesired rereading of same barcode in a given period of time.

To enable/disable the Timeout between Decodes (Same Barcode), scan the appropriate barcode below.

**Enable Timeout between Decodes:** Do not allow the scanner to re-read same barcode before the timeout between decodes (same barcode) expires.

**Disable Timeout between Decodes:** Allow the scanner to re-read same barcode.

0313020

**\*\* Disable Timeout between Decodes**

0313030

**Enable Timeout between Decodes**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

The following parameter sets the timeout between decodes for same barcode. It is programmable in 1ms increments from 0ms to 65,535ms. The default setting is 1,500ms.

To learn how to program this parameter, see **Appendix 5**.

0313010

**Timeout between Decodes (Same Barcode)**

## Sensitivity

Sensitivity specifies the degree of acuteness of the scanner's response to changes in ambient illumination. The higher the sensitivity, the lower requirement in illumination change to trigger the scanner. You can select an appropriate degree of sensitivity that fits the ambient environment.

0312010

**Medium Sensitivity**

0312000

**Low Sensitivity**

0312020

**High Sensitivity**

0312030

**Enhanced Sensitivity**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

---

If the above four options fail to meet your needs, you may program the threshold value of illumination change.

Illumination changes that reaches or surpasses the predefined threshold value will cause the scanner to start a decode session. The lower the threshold value, the greater the sensitivity of the scanner. The default threshold value is 2.

To learn how to program this parameter, see **Appendix 5**.

0312040

**Threshold Value of Illumination Change (1-20)**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## Continuous Mode

This mode enables the scanner to scan/capture, decode and transmit over and over again.

When the scanner is operating in Continuous Mode, barcode reading can be suspended/resumed through control over the trigger signal. When barcode reading is in progress, negating the trigger signal after having maintained it for 30ms or longer will suspend barcode reading; when barcode reading is suspended, performing the same control over the trigger signal will resume barcode reading.

0302020

**Continuous Mode**

## Decode Session Timeout

This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 1ms increments from 0ms to 3,600,000ms. The default setting is 3,000ms. To learn how to program this parameter, see **Appendix 5**.

0313000

**Decode Session Timeout**

## Timeout between Decodes

This parameter sets the timeout between decode sessions. When a decode session ends, next session will not happen until the timeout between decodes expires. It is programmable in 1ms increments from 0ms to 65,535ms. The default setting is 1,000ms. To learn how to program this parameter, see **Appendix 5**.

## Chapter 4 Scanning Preferences

### Introduction

This chapter contains information as to how to adapt your scanner to various applications with preference setting. For instance, to narrow the field of view of the scanner to make sure it reads only those barcodes intended by the user.

### Decode Area

#### Whole Area Decoding

When this option is enabled, the scanner attempts to decode barcode(s) within its field of view, from the center to the periphery, and transmits the barcode that has been first decoded.

0322000

**\*\* Whole Area Decoding**

#### Central Area Decoding

The scanner attempts to decode barcode(s) within a specified central area and transmits the barcode that has been first decoded. This option allows the scanner to narrow its field of view to make sure it reads only those barcodes intended by the user. For instance, if multiple barcodes are placed closely together, central area decoding in conjunction with appropriate pre-defined central area will insure that only the desired barcode is read.

0322010

**Central Area Decoding**

0006000

**\* Exit Setup**

0006010

Enter Setup

## Specify Central Area

The default central area is a (Width\*20%) by (Height\*20%) area in the center of the scanner's field of view, as shown in the figure below. You can define the central area by scanning the **Specify Central Area** barcode and numeric barcode(s) corresponding to a desired percentage (1-100). If Central Area Decoding is enabled by scanning the **Central Area Decoding** barcode, the scanner only reads barcodes that intersect the predefined central area.

To learn how to program this parameter, see the “**Appendix 5: Parameter Programming Examples**”.

## Chapter 5 Illumination & Aiming

### Illumination

A couple of illumination options are provided to improve the lighting conditions during every image capture:

**Normal:** Illumination LEDs are turned on during image capture.

**Always ON:** Illumination LEDs keep ON after the scanner is powered on.

**OFF:** Illumination LEDs are OFF all the time.

0200000

## Aiming

When scanning/capturing image, the scanner projects an aiming pattern which allows positioning the target barcode within its field of view and thus makes decoding easier.

**Normal:** The scanner projects an aiming pattern only during barcode scanning/capture.

**Always ON:** Aiming pattern is constantly ON after the scanner is powered on.

**OFF:** Aiming pattern is OFF all the time.

## Chapter 7 Data Formatting

In many applications, barcode data needs to be edited and distinguished from one another.

Usually AIM ID and Code ID can be used as identifiers, but in some special cases customized prefix and terminating character suffix like Carriage Return or Line Feed can also be the alternatives.

Data formatting may include:

- ❖ Append AIM ID/Code ID/custom prefix before the decoded data
- ❖ Append custom suffix after the decoded data
- ❖ Append terminating character to the end of the data

The following formats can be used when editing barcode data:

- ❖ [Code ID] + [Custom Prefix] + [AIM ID] + [DATA] + [Custom Suffix] + [Terminating Character]
- ❖ [Custom Prefix] + [Code ID] + [AIM ID] + [DATA] + [Custom Suffix] + [Terminating Character]

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## General Settings

### Enable/Disable All Prefix/Suffix

**Disable All Prefix/Suffix:** Transmit barcode data with no prefix/suffix.

**Enable All Prefix/Suffix:** Allow user to append Code ID prefix, AIM ID prefix, custom prefix/suffix and terminating character to the barcode data before the transmission.

0311010

**Enable All Prefix/Suffix**

0311000

**Disable All Prefix/Suffix**

## Prefix Sequences

0317010

0317040

**\*\* Custom Prefix+Code ID+AIM ID**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## Custom Prefix

### Enable/Disable Custom Prefix

If custom prefix is enabled, you are allowed to append to the data a user-defined prefix that cannot exceed 10 characters.

0305010

**Enable Custom Prefix**

0305000

**\*\* Disable Custom Prefix**

### Set Custom Prefix

To set a custom prefix, scan the **Set Custom Prefix** barcode and the numeric barcodes representing the hexadecimal values of a desired prefix and then scan the **Save** barcode. Refer to **Appendix 4: ASCII Table** for hexadecimal values of characters.

**Note:** A custom prefix cannot exceed 10 characters.

0300000

**Set Custom Prefix**

#### Example: Set the custom prefix to “CODE”

1. Check the hex values of “CODE” in the ASCII Table. (“CODE”: 43, 4F, 44, 45)
2. Scan the **Enter Setup** barcode.
3. Scan the **Set Custom Prefix** barcode.
4. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5”.
5. Scan the **Save** barcode.
6. Scan the **Exit Setup** barcode.

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## AIM ID Prefix

AIM (Automatic Identification Manufacturers) IDs and ISO/IEC 15424 standards define symbology identifiers and data carrier identifiers. (For the details, see the “**Appendix 2: AIM ID Table**” section). If AIM ID prefix is enabled, the scanner will add the symbology identifier before the scanned data after decoding.

0308030

**Enable AIM ID Prefix**

0308000

**\*\* Disable AIM ID Prefix**

## Code ID Prefix

Code ID can also be used to identify barcode type. Unlike AIM ID, Code ID is user programmable. Code ID can only consist of one or two English letters.

0307010

**Enable Code ID Prefix**

0307000

**\*\* Disable Code ID Prefix**

## Restore All Default Code IDs

For the information of default Code IDs, see the “**Appendix 3: Code ID Table**” section.

## Custom Suffix

### Enable/Disable Custom Suffix

If custom suffix is enabled, you are allowed to append to the data a user-defined suffix that cannot exceed 10 characters.

0306010

**Enable Custom Suffix**

0306000

**\*\* Disable Custom Suffix**

### Set Custom Suffix

To set a custom suffix, scan the **Set Custom Suffix** barcode and the numeric barcodes representing the hexadecimal values of a desired suffix and then scan the **Save** barcode. Refer to **Appendix 4: ASCII Table** for hexadecimal values of characters.

**Note:** A custom suffix cannot exceed 10 characters.

0301000

**Set Custom Suffix**

#### Example: Set the custom suffix to “CODE”

1. Check the hex values of “CODE” in the ASCII Table. (“CODE”: 43, 4F, 44, 45)
2. Scan the **Enter Setup** barcode.
3. Scan the **Set Custom Suffix** barcode.
4. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5”.
5. Scan the **Save** barcode.
6. Scan the **Exit Setup** barcode.

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## Terminating Character Suffix

A terminating character can be used to mark the end of data, which means nothing can be added after it.

A terminating character suffix can contain one or two characters.

### Enable/Disable Terminating Character Suffix

To enable/disable terminating character suffix, scan the appropriate barcode below.

0309010

**\*\* Enable Terminating Character Suffix**

0309000

**Disable Terminating Character Suffix**

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## Set Terminating Character Suffix

The scanner provides a shortcut for setting the terminating character suffix to 0x0D or 0x0D,0x0A by scanning the following barcode.

0310010

**Terminating Character 0x0D**

0310020

**\*\* Terminating Character 0x0D,0x0A**

To set a terminating character suffix, scan the **Set Terminating Character Suffix** barcode and the numeric barcodes representing the hexadecimal value of a desired terminating character and then scan the **Save** barcode. Refer to **Appendix 4: ASCII Table** for hexadecimal values of terminating characters.

**Note:** A terminating character suffix cannot exceed 2 characters.

0310000

**Set Terminating Character Suffix**

### Example: Set the terminating character suffix to 0x0D

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Terminating Character Suffix** barcode.
3. Scan the numeric barcodes “0” and “D”.
4. Scan the **Save** barcode.
5. Scan the **Exit Setup** barcode.

0006000

**\* Exit Setup**

0006010

**Enter Setup**

## Chapter 8 Symbologies

### General Settings

#### Enable/Disable All Symbologies

If the **Disable All Symbologies** feature is enabled, the scanner will not be able to read any non-programming barcodes except the programming barcodes.

0001020

**Enable All Symbologies**

0001010

**Disable All Symbologies**

#### Enable/Disable 1D Symbologies

If the **Disable 1D Symbologies** feature is enabled, the scanner will not be able to read any 1D barcodes.

0001040

**Enable 1D Symbologies**

0001030

**Disable 1D Symbologies**

#### Enable/Disable 2D Symbologies

If the **Disable 2D Symbologies** feature is enabled, the scanner will not be able to read any 2D barcodes.

0001060

**Enable 2D Symbologies**

0001050

**Disable 2D Symbologies**

0006000

**\* Exit Setup**

0006010

## Check Digit Verification

A check digit is optional for Interleaved 2 of 5 and can be added as the last digit. It is a calculated value used to verify the integrity of the data.

**Disable:** The scanner transmits Interleaved 2 of 5 barcodes as is.

**Do Not Transmit Check Digit After Verification:** The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted except the last digit, whereas those failing it will not be transmitted.

**Transmit Check Digit After Verification:** The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted, whereas those failing it will not be transmitted.

0405050

**\*\* Disable**

0405060

**Do Not Transmit Check Digit After Verification**

0405070

**Transmit Check Digit After Verification**

**Note:** If the **Do Not Transmit Check Digit After Verification** option is enabled, Interleaved 2 of 5 barcodes with a length that is less than the configured minimum length after having the check digit excluded will not be decoded. (For example, when the **Do Not Transmit Check Digit After Verification** option is enabled and the minimum length is set to 4, Interleaved 2 of 5 barcodes with a total length of 4 characters including the check digit cannot be read.)

## Chapter 9 Image Control

### Ambient Illumination

Ambient lighting conditions may vary from one operating environment to another, such as fluorescent lit warehouses or sunlit open spaces. Fluorescent lights may flicker when using AC power source in 50-60Hz. Usually indoor illuminance is around 1,000 lux while outdoor illuminance may reach 60,000 lux or even over 100,000 lux.

Two options are provided for ambient illumination settings:

**Normal Illuminance:** applicable to most indoor/outdoor environments.

**High Illuminance:** applicable to special environments with super-intense light source.

Change to this settings will not take effect until the scanner reboots or wakes up from sleep.

0313150

## Image Flipping

The user may get reversed images when the scanner is installed in non-standard ways. When it happens, image flipping can be used to right the “wrong”.

The following figures illustrate standard image and three flipped images.

- ✧ Fig.8-1 Standard Image: Image the scanner should get when it is installed properly and no reflector is used in its optical imaging system.
- ✧ Fig.8-2 Horizontal Flipped Image: It happens when horizontal reflection occurs along the optical path. To get standard images, enable the **Flip Horizontally** option.
- ✧ Fig.8-3 Vertical Flipped Image: It happens when vertical reflection occurs along the optical path. To get standard images, enable the **Flip Vertically** option.
- ✧ Fig.8-4 Horizontal and Vertical Flipped Image: It happens when the scanner is installed upside down. To get standard images, enable the **Flip Horizontally and Vertically** option.

## Chapter 10 Troubleshooting

### FAQ

#### **Problem: Barcodes cannot be read.**

Solution:

1. Find out the barcode type and verify that the barcode type is enabled. If the barcode parameters include check digit verification, select the Disable option.
2. If you do not know the barcode type, enable all symbologies.
3. If they are inverse barcodes (bright images on a dark background), enable the Video Reverse feature.

#### **Problem: Incorrect output.**

Solution:

1. If this problem happens to all barcodes and additional characters appear before/after barcode data, disable all prefix/suffix.
2. If this problem only happens to some barcodes and matches one of the following situations:
  - a) incomplete barcode data: Enable the check digit verification.
  - b) both the first and last characters are asterisks (\*): Disable the transmission of start/stop characters of Code 39.
  - c) "a" transmitted as "+A": Enable Code 39 Full ASCII.

#### **Problem: Barcodes can be read, but cannot be displayed.**

Solution: Verify that the serial port parameter (such as baud rate, data bit and stop bit) settings match the host requirements.

---

**Problem: Illumination and aiming beams are OFF.**

Solution:

1. Verify that the scanner is properly powered up.
2. Send “?” to the scanner. If the scanner returns a reply of “!”, then send programming commands to turn on illumination and aimer.

**Problem: Carriage Return/Line Feed settings.**

Solution: See the “**Terminating Character Suffix**” section in Chapter 7.

---

## Appendix

### Appendix 1: Factory Defaults Table

Parameter	Factory Default	Remark
<b>Programming Barcode</b>		
Barcode Programming	Disabled	
Programming Barcode Data	Do not send	
<b>Communication Settings</b>		
Power-Saving Mode (Only RS-232 supported)	Enabled	Normal Mode: RS-232 & USB supported
RS-232	Baud Rate	9600
	Parity Check	None
	Data Bit	8
	Stop Bit	1
	Hardware Flow Control	No flow control
HID-KBW	USB Country Keyboard Type	U.S.
	Convert Case	No conversion
	Inter-Keystroke Delay	No delay
	Beep on Unknown Character	Do not beep
<b>Scan Mode</b>		
Scan Mode	Batch mode	Options: Batch mode, Trigger mode, Sense mode, Continuous mode.
Trigger Mode	Decode Session Timeout	3,000ms 0~3,600,000ms
	Trigger Condition	Electric level
	Auto Sleep	Enabled
	Time Period from Idle to Sleep	500ms 0~65,535ms
Sense Mode	Decode Session Timeout	3,000ms 0~3,600,000ms
	Image Stabilization Timeout	500ms 0~1,600ms
	Operation after Good Decode	Pause after good decode
	Timeout between Decodes (Same Barcode)	Disabled 1,500ms 0~65,535ms
	Threshold Value of Illumination Change	2 1~20

<b>Parameter</b>		<b>Factory Default</b>	<b>Remark</b>
Continuous Mode	Decode Session Timeout	3,000ms	Applicable to Trigger mode, Sense mode, Continuous mode. 0~3,600,000ms
	Timeout between Decodes	1000ms	0~65,535ms
Cellphone Read Mode		Disabled	
<b>Scanning Preferences</b>			
Decode Area		Whole Area Decoding	
Central Area		20%	
<b>Illumination &amp; Aiming</b>			
Illumination		Normal	
Aiming		Normal	
<b>Beep &amp; LED Indications</b>			
Startup Beep		Enabled	
(Non-Programming Barcode)	Notification	Enabled	
	Beep Type	Type 3	
	Beep Volume	Loud	
Beep after Good Decode (Programming Barcode)		Enabled

## Appendix 5: Parameter Programming Examples

The following examples show you how to program parameters by scanning programming barcodes.

### a. Program the Decode Session Timeout

**Example: Set the decode session timeout to 1500ms**

1. Scan the **Enter Setup** barcode.
2. Scan the **Decode Session Timeout** barcode. (See the “**Decode Session Timeout**” section in Chapter 3)
3. Scan the numeric barcodes “1”, “5”, “0” and “0”.
4. Scan the **Save** barcode.
5. Scan the **Exit Setup** barcode. (If you still need to program other parameter/feature, skip this step.)

### b. Program the Time Period from Idle to Sleep

**Example: Set the time period from idle to sleep to 500ms**

1. Scan the **Enter Setup** barcode.
2. Scan the **Time Period from Idle to Sleep** barcode. (See the “**Auto Sleep**” section in Chapter 3)
3. Scan the numeric barcodes “5”, “0” and “0”.
4. Scan the **Save** barcode.
5. Scan the **Exit Setup** barcode. (If you still need to program other parameter/feature, skip this step.)

### c. Program the Image Stabilization Timeout

**Example: Set the image stabilization timeout to 500ms**

1. Scan the **Enter Setup** barcode.
  2. Scan the **Image Stabilization Timeout** barcode. (See the “**Image Stabilization Timeout**” section in Chapter 3)
  3. Scan the numeric barcodes “5”, “0” and “0”.
  4. Scan the **Save** barcode.
  5. Scan the **Exit Setup** barcode. (If you still need to program other parameter/feature, skip this step.)
-

---

#### d. Program the Timeout between Decodes (Same Barcode)

**Example: Set the timeout between decodes (same barcode) to 1000ms**

1. Scan the **Enter Setup** barcode.
2. Scan the **Timeout between Decodes (Same Barcode)** barcode. (See the “**Timeout between Decodes (Same Barcode)**” section in Chapter 3)
3. Scan the numeric barcodes “1”, “0”, “0” and “0”.
4. Scan the **Save** barcode.
5. Scan the **Exit Setup** barcode. (If you still need to program other parameter/feature, skip this step.)

#### e. Program the Threshold Value of Illumination Change

**Example: Set the threshold value of illumination change to 4**

1. Scan the **Enter Setup** barcode.
2. Scan the **Threshold Value of Illumination Change** barcode. (See the “**Sensitivity**” section in Chapter 3)
3. Scan the numeric barcode “4”.
4. Scan the **Save** barcode.
5. Scan the **Exit Setup** barcode. (If you still need to program other parameter/feature, skip this step.)

#### f. Program the Timeout between Decodes

**Example: Set the timeout between decodes to 500ms**

1. Scan the **Enter Setup** barcode.
  2. Scan the **Timeout between Decodes** barcode. (See the “**Timeout between Decodes**” section in Chapter 3)
  3. Scan the numeric barcodes “5”, “0” and “0”.
  4. Scan the **Save** barcode.
  5. Scan the **Exit Setup** barcode. (If you still need to program other parameter/feature, skip this step.)
-

---

### g. Program the Central Area

**Example: Set the percentage of central area to 20%**

1. Scan the **Enter Setup** barcode.
2. Scan the **Specify Central Area** barcode.
3. Scan the numeric barcodes “2” and “0”.
4. Scan the **Save** barcode.
5. Scan the **Exit Setup** barcode. (If you still need to program other parameter/feature, skip this step.)

### h. Program the Custom Prefix/Suffix

**Example: Set the custom prefix to “CODE”**

1. Check the hex values of “CODE” in the ASCII Table. (“CODE”: 43, 4F, 44, 45)
2. Scan the **Enter Setup** barcode.
3. Scan the **Set Custom Prefix** barcode. (See the “**Set Custom Prefix**” section in Chapter 6)
4. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5”.
5. Scan the **Save** barcode.
6. Scan the **Exit Setup** barcode. (If you still need to program other parameter/feature, skip this step.)

### i. Program the Terminating Character Suffix

**Example: Set the terminating character suffix to 0x0D**

1. Scan the **Enter Setup** barcode.
  2. Scan the **Set Terminating Character Suffix** barcode. (See the “**Set Terminating Character Suffix**” section in Chapter 6)
  3. Scan the numeric barcodes “0” and “D”.
  4. Scan the **Save** barcode.
  5. Scan the **Exit Setup** barcode. (If you still need to program other parameter/feature, skip this step.)
-

---

## j. Program the Code ID

### **Example: Set the Code ID of PDF 417 to “p”**

1. Check the hex value of “p” in the ASCII Table. (“p”: 70)
2. Scan the **Enter Setup** barcode.
3. Scan the **Modify PDF417 Code ID** barcode. (See the “**Modify Code ID**” section in Chapter 6)
4. Scan the numeric barcodes “7” and “0”.
5. Scan the **Save** barcode.
6. Scan the **Exit Setup** barcode. (If you still need to program other parameter/feature, skip this step.)

## k. Program the NGR Message

### **Example: Set the NGR message to “!ERR”**

1. Check the hex values of “!ERR” in the ASCII Table. (“!ERR”: 21, 45, 52, 52)
2. Scan the **Enter Setup** barcode.
3. Scan the **Edit NGR Message** barcode. (See the “**Edit NGR Message**” section in Chapter 5)
4. Scan the numeric barcodes “2”, “1”, “4”, “5”, “5”, “2”, “5” and “2”.
5. Scan the **Save** barcode.
6. Scan the **Exit Setup** barcode. (If you still need to program other parameter/feature, skip this step.)

---

## I. Program the Length Range (Maximum/Minimum Lengths) for a Symbology

**Note:** If minimum length is set to be greater than maximum length, the scanner only decodes barcodes with either the minimum or maximum length. If you only want to read barcodes with a specific length, set both minimum and maximum lengths to be that desired length.

**Example: Set the scanner to decode Code 128 barcodes containing between 8 and 12 characters**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode. (See the “**Set Length Range for Code 128**” section in Chapter 7)
3. Scan the numeric barcode “8”.
4. Scan the **Save** barcode.
5. Scan the **Set the Maximum Length** barcode. (See the “**Set Length Range for Code 128**” section in Chapter 7)
6. Scan the numeric barcodes “1” and “2”.
7. Scan the **Save** barcode.
8. Scan the **Exit Setup** barcode. (If you still need to program other parameter/feature, skip this step.)

---

## Appendix 7: Save/Cancel Barcodes

After reading numeric barcode(s), you need to scan the **Save** barcode to save the data. If you scan the wrong digit(s), you can either scan the **Cancel** barcode and then start the configuration all over again, or scan the **Delete the Last Digit** barcode and then the correct digit, or scan the **Delete All Digits** barcode and then the digits you want.

For instance, after reading the **Maximum Length** barcode and numeric barcodes “1”, “2” and “3”, you scan:

- ✧ **Delete the Last Digit:** The last digit “3” will be removed.
- ✧ **Delete All Digits:** All digits “123” will be removed.
- ✧ **Cancel:** The maximum length configuration will be cancelled. And the scanner is still in the setup mode.

Save

Delete the Last Digit

Delete All Digits

Cancel
